

Assign6.py is a function to achieve Image segmentation. User needs to input two values:

1. picture input path
2. image resolution level (higher input number, lower resolution level)

Following is an example that how to use the program:

```
imSegment("/Users/apple/Documents/MSiA/Spring 2015/MSiA 490  
Python/hw6/sailboat.jpg",30)
```
